Detailed Action

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, drawn to a method of identifying chemical reaction mechanisms for a chemical process, classified in class 702, subclass 22;
 - II. Claims 6-12, drawn to a method of identifying materials for the performance of a chemical process, classified in class 208, subclass 177; and
 - III. Claims 13-16, drawn to a process that enables for the development of scalable high performance materials, classified in class 264, subclass 236.

The inventions are distinct, each from the other because of the following reason:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case:

- The invention of group I can be used to identify chemical reaction mechanisms in a laboratory setting, such as chemical element categorization in blood samples,
- The invention of group II can be used to identify materials in crude oil processing plants, and
- The invention of group III can be practiced in areas where material quality and strength is a desirable outcome, such as a polymerization and vulcanization process.

Art Unit: 2857

2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

3. A telephone call was made to Mr. James M. Singer on June 30, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.
